SUMMARY

Software Engineer with 3+ years of experience in building scalable web applications, cloud-native architectures, and data-driven solutions. Proficient in Java, Spring, AWS, Kafka and React, with a strong focus on system performance, automation, and user experience.

EDUCATION

Master of Science in Computer Science - Arizona State University 3.8/4.0	Jan 2022 - Dec 2023
Bachelor of Technology in Computer Science - Vellore Institute of Technology 3.9/4.0	Aug 2017 - Aug 2021

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, Typescript, HTML, CSS, R, C++.

Databases: SQL Server, MySQL, PostgreSQL, MongoDB, DynamoDB.

Framework/Tools: Angular, React, Redux, Kafka, Node.js, Spring, JPA/Hibernate, Git, Jenkins, Jira, Playwright, Maven.

Cloud Technologies: Amazon Web Services (AWS), Microsoft Azure.

Certifications: Azure Fundamentals, AWS Certified Cloud Practitioner, AWS Certified Developer - Associate

PROFESSIONAL EXPERIENCE

Intuit Software Engineer	San Diego, CA Jun 2025 – Present
- Migrated complex legacy tax platform components into modular microservices using Java, Spring, and gRPC, improving scalability and cutting average service response times by 30% for millions of TurboTax users. - Designed and implemented cost-efficient backend services on AWS to handle ~3M events per hour during peak tax season, driving ~\$100K in annual infrastructure savings while maintaining system reliability and performance. - Enhanced the Refund Transfer process by refactoring RT related endpoints for improved data handling and implementing Kafka producers and consumers to stream refund events in real-time, reducing processing delays and increasing overall efficiency by 25%. - Collaborated with the TRM team to design and enhance GraphQL, Kotlin services that orchestrate tax workflows on top of TaxApp, improving state management and system integration; leveraged Splunk for monitoring and rapid incident response.	
Technologies: Java, Spring, Kotlin, C++, GraphQL, gRPC, REST APIs, AWS, Kafka, Splunk, WaveFront, Git, Jira.	

GE HealthCare Software Engineer	Seattle, WA Jun 2024 – Jun 2025
- Built the intake tile for OHSU, developing backend services in Java, Spring and SQL stored procedures to support critical workflows, contributing to seamless operations and generating \$1M in revenue. - Migrated legacy services from Java 8 to 17 and optimized backend performance by refactoring core modules, resulting in improved system maintainability and a 10% decrease in latency. - Modernized the frontend of the Hospital AI using React, improving UI responsiveness and user satisfaction by 35%. - Integrated backend microservices using AWS SDKs (Lambda, API Gateway, DynamoDB, OpenSearch) to support a serverless data processing pipeline, resulting in a 40% increase in throughput and 60% faster query responses.	
Technologies: Java, Spring, React, AWS (Lambda, DynamoDB, API Gateway, OpenSearch), SQL Server, RabbitMQ, HL7, FHIR.	

NavTech Electronics Software Engineer	Hyderabad, India Jan 2020 – Dec 2021
- Engineered a dashboard using Java and Spring Boot, refactored REST APIs for internal tools, improving test result visibility, accelerating testing by 30%, and boosting system responsiveness by 20%. - Implemented Kafka-based messaging pipelines within the microservices architecture to capture and stream real-time test logs and system metrics, improving data throughput by 35% and ensuring reliable, low-latency communication between services. - Crafted interactive UI components using React and managed application state with Redux, refining user interactions and delivering a 45% uplift in data visualization clarity and usability. - Deployed, managed, and monitored applications using AWS services like EC2, S3, and CloudWatch, ensuring high availability, scalability, and elevating infrastructure reliability by 15%.	
Technologies: Java, Spring Boot, Kafka, REST API, React, Redux, Docker, AWS (EC2, S3, CloudWatch), Git, SQL Server, Jenkins.	

PROJECTS

Course Registration Gateway <i>Java, Spring Boot, Angular, PostgreSQL, Azure</i>	Jan 2022 - May 2022
Developed a Course Registration web app using Java, Spring Boot, and Azure, streamlining user registration processes and maintaining 99.9% uptime with scalable infrastructure and secure data management.	
Personal Finance Tracker with Expense Prediction <i>React, Node.js, MongoDB, Python, TensorFlow</i>	Jan 2021 - May 2021
Developed a full-stack personal finance app that tracks expenses and uses ML models to forecast spending patterns, helping users reduce overspending by 25%.	
Autonomous Banking Chatbot <i>Java, Spring Boot, AWS, Angular</i>	Aug 2019 - Dec 2019
Created an MVC-based banking chatbot system capable of handling 100+ user queries with 95% response accuracy, and achieved scaling with AWS, achieving 65% higher system availability.
