SUMMARY

Software Engineer with 3+ years of experience in building scalable web applications, cloud-native architectures, and data-driven solutions. Proficient in Java, Python, JavaScript, AWS, and React, with a strong focus on system performance, automation, and user experience.

PROFESSIONAL EXPERIENCE

Software Engineer, GE Healthcare | Seattle, WA

Jun 2024 - Present

- Migrated critical applications from Java 8 to 17, boosting system performance and maintainability, while integrating RabbitMQ for asynchronous messaging, increasing data processing reliability by 35%.
- Collaborated with the data ingestion team to design and implement components for streamlined HL7 and FHIR message processing, enabling seamless interoperability across healthcare systems.
- Modernized the frontend of the Command Center 2.0 (Hospital AI) from AngularJS to React, leveraging AWS services to ensure 99.9% uptime and improved system stability for patient monitoring.
- Developed a serverless, microservices-based cloud architecture using AWS Lambda, API Gateway, DynamoDB, and OpenSearch, improving data processing throughput by 40% and cutting query response times by 60%.

Technology Solutions Engineer, Samirian Chemicals | Campbell, CA

Mar 2024 - Jun 2024

- Conducted data analysis using Python on chemical supply chain datasets, optimizing operational decision-making accuracy by 30%.
- Implemented end-to-end data pipelines for processing and transforming raw data into interactive analytical reports and dashboards using Tableau and Power BI, resulting in a 45% improvement in reporting speed and enabling faster data-driven decisions.
- Automated data processing tasks with Python scripts, eliminating manual processes and achieving a 50% uplift in data availability.
- Enhanced the UI of the company website using React and modern design practices, improving user engagement and visual appeal, which contributed to a 25% increase in visitor retention and inquiries.

Graduate Teaching Assistant, Arizona State University | Tempe, AZ

May 2023 - Dec 2023

- Designed Data Visualization course to develop course materials and assignments for a class of 200 students.
- Spearheaded a collaborative initiative with the university marketing team, crafting impactful data visualizations to enhance prospective student engagement, achieving an 80% surge in data comprehension among applicants.
- Facilitated students by providing guidance on tools such as Tableau and Power BI, leading to 99% student success rate.
- Conducted exploratory research using Python, SQL, and data visualization libraries to analyze large academic datasets, uncovering trends that informed both course material improvements and supported 3 ongoing departmental research projects.

Software Engineer, Nav Tech Electronics | Hyderabad, India

Jan 2020 - Dec 2021

- Engineered a dashboard using Java and Spring, integrating optimized REST APIs for internal tools, which elevated test result visibility and management while accelerating the testing process by 30% and increasing system responsiveness by 20%.
- Containerized applications using Docker, streamlining deployment workflows and reducing environment configuration issues by 55%, resulting in 40% faster deployment cycles.
- Crafted interactive UI components using React and managed application state with Redux, refining user interactions and delivering a 45% uplift in data visualization clarity and usability.
- Deployed, managed, and monitored applications using AWS services like EC2, S3, and CloudWatch, ensuring high availability, scalability, and elevating infrastructure reliability by 15%.

PROJECTS

Course Registration Gateway | *Java, Spring Boot, Angular, Azure*

Jan 2022 - May 2022

- Developed a Course Registration web app using Java, Spring Boot, and Azure, streamlining user registration processes and maintaining 99.9% uptime with scalable infrastructure and secure data management.

Autonomous Banking Chatbot | *Java, Spring Boot, AWS, Angular*

Aug 2019 - Dec 2019

- Created an MVC-based banking chatbot system capable of handling 100+ user queries with 95% response accuracy, and achieved scaling with AWS, achieving 65% higher system availability.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, Typescript, HTML, CSS, R, C++

Database: SQL Server, MySQL, PostgreSQL, MongoDB, DynamoDB

Framework/Tools: Angular, React, Node.js, Redux, Spring Boot, JPA/Hibernate, Git, Jenkins, JIRA, Postman, IntelliJ IDEA, Visual Studio

Cloud Technologies: Amazon Web Services (AWS), Microsoft Azure

Development Practices: Full-stack development, CI/CD, Automation, TDD, Design Patterns, Agile, SDLC, and Code Reviews

EDUCATION

Master of Science in Computer Science - Arizona State University | 3.8/4.0

Jan 2022 - Dec 2023

Bachelor of Technology in Computer Science - Vellore Institute of Technology | 3.9/4.0

Aug 2022 - Aug 2023

PRESENTATIONS

- Bridge Safety Monitoring System Using Machine Learning, in National Conference on Recent Advances in Technology [\[View Paper\]](#).
